ADVANCED DIAGNOSTIC SOFTWARE FUNCTIONALITIES

WOW! VEHICLE DIAGNOSTICS UPDATE 5.31.02 AND 5.32.00

For 20 years, the company WOW! Würth Online World GmbH (WOW!) supports its customers with diagnostic systems from the workshop for the workshop. Since then, the goal of the company has been to help customers solve complex tasks in the workshop quickly and easily. To achieve this goal, the diagnostics specialist within the Würth Group is constantly developing its diagnostic software.

With the WOW! diagnostics software update 5.32.00, which has been available since the end of March, the total number of vehicles in the diagnostics sector has thus grown to **69 manufacturers** with **1,428 different models**. In addition, the electro mobility systems (6.67%) and calibration of driver assistance systems (3.28%) record the highest rates of increase within the diagnosis coverage. In addition to the ongoing database expansion, the diagnostic software includes new functions for even easier repairs with the updates in February and March 2021.

NEW FUNCTIONALITIES

A new highlight function in the diagnostic software is the display of the **top 10 functions**. This new feature shows the user the 10 most frequently used functions within the software by vehicle. The top 10 functions can be described as "other customers also used", which enables the user an even easier and faster repairs with real-time recommendations from workshops for workshops.

The **function scan** also ensures faster repairs from now on. Starting with version 5.32.00, the function scan displays an overview of the supported and unsupported functions for the selected vehicle. This significantly increases the quality and user-friendliness.

With the help of the new **vehicle information** function, users can also find out even more in-depth information about the vehicle answering questions such as "Does the dashboard show the correct mileage?" or "Are the ECUs of the same age?". All information can be printed quickly and easily. This function is particularly useful for workshops in the area of "used car purchase and sale".

The introduction of the so-called **background update** has improved the user-friendliness of the system. Until now, available updates had to be started manually in the WOW! Software. Starting with software version 5.32.00, all updates within the software are downloaded in the background. In the meantime, customers can work as usual. The online updates (background updates) are available for software and feature updates, diagnosis updates, technical data updates, license renewing and information exchange.

CALIBRATION OF DRIVER ASSISTANCE SYSTEMS

The coverage of the WOW! Software for the calibration of driver assistance systems has been further extended. The ACS cars calibration system can be used to calibrate camera, radar and environment systems. The number of available vehicle models has increased in all three areas. Overall, the rate of increase in calibration in the diagnosis coverage is 3.28%.

The company also offers an optional extension for the calibration system WOW! ACS cars. The calibration board Honda type 1 + Honda type 2 + Kia/Hyundai, consisting of two boards separated and double-sided printed, is now available.

Further information can be found on the WOW! website at www.wow-portal.com.
