ACS CARS – CALIBRATION OF DRIVER ASSISTANCE SYSTEMS

ACS cars from WOW! Würth Online World offers you a flexible and cost-effective system for the calibration of all relevant vehicle brands consisting of hardware and software. The system can be expanded at any time with double-sided, brand-specific calibration boards or the radar accessories. The user in the workshop quickly gets used to the process and can work as effectively as possible. It can be combined individually and cost-effectively and is an indispensable aid in everyday workshop activities.

The software provides clear and concise information about the ACS cars product and the calibration process. A clean documentation of results serves as proof for the workshop, vehicle owner and insurance company.

EXTENDED COVERAGE FOR ACS CARS

- Database extension for camera calibration for models from BMW, Hyundai, Kia, Mitsubishi, Peugeot and Skoda
- New radar calibration for models from Audi, BMW, MAN (LCV), Peugeot, Skoda and Volkswagen

A detailed list of the vehicles covered will be available shortly on our homepage.

WOW! NEWS

ELECTROMOBILITY

NEW AND ADVANCED MODELS

With the Hyundai KONA EV, the KIA NIRO EV and the Renault (NEW) ZOE we are expanding our vehicle database in the area of fully electric models.

Please always think of your personal safety when handling high-voltage systems. For this purpose, the Würth Academy offers the course "Seminar for skilled persons working on high-voltage systems in a de-energised state".

INFORMATION

DO YOU ALREADY KNOW THE WOW! BATTERY HEALTH CHECK DIAGNOSTIC FUNCTION?

The WOW! Diagnostic function "Battery Health Check" helps to evaluate the battery condition. It shows if the battery is OK or if and where there is a weakness that reduces the overall performance. "Faulty" voltage or voltage that does not correspond to the set values is immediately displayed in the system.

We hope you enjoy working with the WOW! Software and the WOW! 5.31.00 update and we wish you a relaxed working day.

Your WOW! team
